

## **Solution Architect -Retail**

We're seeking an experienced **Solution Architect** who is responsible for planning, designing , and implementation of Java/python/AWS/Cloud based web application/projects ensuring they are completed on time, within scope, and within budget. They coordinate between teams, manage resources, mitigate risks, and ensure alignment with business goals.

| SN | Required Information         | Details                           |
|----|------------------------------|-----------------------------------|
| 1  | Role                         | Solution Architect Retail         |
| 2  | Required Technical Skill Set | Java/Python/AWS                   |
| 3  | Desired Experience Range     | 6+ Years                          |
| 4  | No of Requirements           |                                   |
| 5  | Location of Requirement      | TCS Kolkata, Bhubaneswar, Chennai |

### **Desired Competencies (Technical/Behavioral Competency)**

**Retail Domain Experience**

Strong functional understanding of:

- Omnichannel Retail
- Merchandising
- Pricing & Promotions
- Inventory Management
- Supply Chain Management
- Store Operations
- POS Systems
- Customer Loyalty Programs
- eCommerce Platforms

**Architecture & Design**

- Solution Architecture
- Application Architecture
- API Architecture
- Integration Patterns
- Security Architecture
- Performance Engineering

**Cloud & DevOps**

- AWS / Azure / GCP
- CI/CD Pipelines
- Kubernetes
- Docker
- Infrastructure as Code (Terraform/CloudFormation)

**Data & Analytics**

- SQL & NoSQL Databases
- Data Modeling
- Reporting & Analytics Platforms

|                     |                                                                                                                                                                                                                                                            |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Good-to-Have</b> | Soft skills <ul style="list-style-type: none"> <li>• Strategic thinking and problem-solving</li> <li>• Collaboration and teamwork</li> <li>• Effective communication and stakeholder management</li> <li>• Adaptability and continuous learning</li> </ul> |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| SN | Responsibility of / Expectations from the Role                                                                           |
|----|--------------------------------------------------------------------------------------------------------------------------|
| 1  | Lead the design and architecture of complex web applications, considering scalability, performance, and maintainability. |
| 2  | Evaluate and select appropriate frameworks based on project requirements.                                                |
| 3  | Create detailed technical design documents, including system diagrams, data flow, and API specifications.                |
| 4  | Ensure application security, performance, and scalability.                                                               |
| 5  | Collaborate with cross-functional teams, including designers, testers, and DevOps engineers.                             |
| 6  | Work with cloud platforms AWS, for deployment and monitoring.                                                            |
| 7  | Follow Agile methodologies (Scrum/Kanban) and participate in sprint planning                                             |
